Addendum to AZ1315, Pinion Needle Scale

January 22, 2026

The information provided in our “Pinion Needle Scale” publication dated December 2011 is still accurate. However, **Dimethoate**, the systemic insecticide labeled for application on pinyon needle scale egg masses prior to emergence, is not readily available to homeowners. A systemic insecticide with the active ingredient **Dinotefuran** is more readily available, can be applied in early spring and is now a recommended management strategy for heavy infestations.
