COTTON PLANTING

Cotton planting is just around the corner and the AZMET Cotton Planting Advisory is pumping out information for your use. While we are still several weeks away from planting, it’s good to know that this information is available to you, and posted for your review at [www.cals.arizona.edu/azmet/cotton.htm](http://www.cals.arizona.edu/azmet/cotton.htm). The Cotton Planting Advisory tracks heat units and gives weather updates to assist you in making the best decision for planting.

The *Planting Date Management* publication provides you with more information on the Heat Unit (HU) data that is provided in the graph, as well as other topics of interest associated with planting date, and it is only one page long. Key points include ensuring your soil temperature is 60 degrees Fahrenheit for three straight days, at 8am before planting, to promote good seedling vigor and reduce seedling diseases. Also, make sure there is a favorable weather forecast of at least five days with highs in the 80’s and lows in the upper 40’s.
