DESCRIPTION OF TREES AND SHRUBS – 2018

FRUIT TREES

1. HONEY CRISP APPLES – Zone 3. Crisp, juicy with excellent flavor, rated superior. Keeps in common storage up to 5 months. Fruit is mottled red over yellow. Ripens late September to late October.

3. GALA APPLE – Zone 5. Great fruiting qualities and superior red color. Colors early with dark red striping over solid red undercover. Good pollinator with mid-season bloom. Ripens mid-September to late October. Self-fertile.

SHRUBS

8. GOLDEN CURRANT – Zone 2. Erect shrub to 5’. 2” racemes of small bright golden-yellow spring flowers with spicy fragrance. Colorful red, yellow, orange to black edible fruit attracts birds. Native to the Western Intermountain U.S. Outstanding red fall foliage. Useful ornamental, edible landscape shrub.

9. COMMON PRIVET – Zone 4. Shrub to 15’ if unsheared. Commonly used as either a sheared or unsheared hedge. Foliage is distinct dark green, white flowers.

11. BRIDAL WREATH – Zone 4. To 6’. Upright, dense, bush habit. Branches arch out, pure white double spring blooms in clusters along branches make their show in spring. Old fashioned favorite. Excellent foundation planting or border hedge. Wonderful red, orange, purple fall color.

TREES

12. AMUR MAPLE – Zone 3. To 20’. Small, shrubby maple widely used for screening and shelterbelts. Easily trained as multi-trunk specimen, hardy and tough. Dense glossy foliage, vivid scarlet autumn leaf color, fragrant spring bloom clusters. Low maintenance, establishes readily on most sites.

13. WHITE ASH – Zone 3. To 120’. Vigorous tree. Leaves turn deep purple or yellow in fall. Valuable hardwood, ornamental or understock. Native to the eastern U.S. Rugged, drought tolerant.

A limited number of trees/shrubs have been ordered and will be sold on a first-come, first-served basis.
